BUSINESS AFFAIR OFFICE

PEST CONTROL SERVICES

\* Inspection - Conducting a thorough inspection of the whole area to look for different signs of pests.

\* Mistig Operation (for flying insects)- misting machine is ideally use in enclose area. It is used with a mixture of water and insecticide via using high volumes of air at low pressure to produce aerosol droplets of a fairly precise size to treat a space.

\* Surface a spraying (for crawling insects) - With the use of compressed sprayer, pumping air to the tank which puts downward pressure on the water mixed with FDA approved chemical. It is a chosen technique for cracks and crevices, drainage area and other areas that are prone to crawling insects.

\* Rodent/Rat Control - We use different method depends upon the level of infestation. We use rodent traps (glue or mechanical) and poison balls also known as rodenticides which are lethal for rodents or a combination of these three.
